Design Project #1

2015 0203, Yuzuru Takashima

Page 4 (RED part is updated, please use updated numbers and instructions)

Change the entrance pupil diameter value such that the lens will operate at F/2.8.

Define the "Y Angles" for H= 0, 0.5, 0.7, 0.85, and 1.0, where the maximum semi-field object angle is 20˚.

This will allow you to analyze the optical performance of the lens at five different field locations. Also, lets delete all the vignetting: System Data->Fields/Vignetting->Clear All Vignetting
